# Introduction

Like many Americans, you've taken your retirement seriously and have been contributing to your 401(k) and IRA. As qualified retirement savings vehicles, they allow you to save pre-tax money and let it accumulate on a tax-deferred basis until retirement. But, there are limits to how much can be contributed annually, and they often don't offer guaranteed investment options.

Let's say you are getting closer to your retirement age goal, you've either maxed out your 401(k) and IRA contributions and/or are looking for a decent return with a minimal amount of risk. You like the security of a CD but wish you could get a better return. The good news is there is another option.

A fixed annuity is essentially a certificate of deposit (CD) sold by an insurance company and without the backing of the FDIC deposit insurance program. While CDs are great for low-risk short-term savings, fixed annuities are more suited to retirement savings, offering:

- Typically higher crediting rates over longer time horizons,
- tax-deferred growth,
- the ability to annuitize at the end of the investment term, and
- liquidity via penalty-free partial withdrawals.

---

Fixed annuities are also known as multi-year guaranteed annuities (MYGAs), fixed rate annuities, fixed deferred annuities, and single premium deferred annuities.

---

In this guide, we'll provide an overview of fixed annuities, covering how they work, what makes them an appropriate (or inappropriate) investment for you, and how to approach the buying process.

## What Is a Fixed Annuity?

A fixed annuity is a tax-deferred retirement savings vehicle that provides fixed asset accumulation, much like a CD. With a fixed annuity, you can invest your savings over a specified time horizon (typically 3 to 10 years), earning a fixed return. The interest earned in your fixed annuity is not taxed until withdrawn, and your principal is guaranteed.

Because annuity terminology – and the fact that a fixed annuity is an annuity in the first place – is confusing, let’s break it down:

A fixed annuity is an **annuity**

An annuity is an insurance vehicle where a lump-sum amount is exchanged for a stream of payments going forward. What makes a fixed annuity an annuity is that it has the option to annuitize, or get the stream of payments, at the end of the investment term. You can also choose to leave your money invested at a renewable rate, withdraw all or a portion, or roll it over into a new fixed annuity. The distinction of being an annuity gives it its tax-deferred status.

More specifically, a fixed annuity is an **accumulation annuity**

An accumulation annuity is bought for the growth potential of the money invested, and not as much for the ability to turn that money into income (as is the case with an income annuity). During the accumulation, or deferral, period your money will be invested with an insurance company and grow on a tax-deferred basis. You will often have some access to your money – typically the interest accrued or 10% of your balance – while it's invested. Accumulation annuities grow either at a fixed rate (like fixed annuities) or grow based on market performance (as with variable and indexed annuities).

And finally, a fixed annuity is a **multi-year guaranteed** accumulation annuity

Fixed annuities earn a fixed rate over a multi-year time horizon. The interest rate will be specified upfront and will vary based on the amount you're investing, your investment term, the credit rating of the insurer, and market conditions at the time of purchase. At the end of the guarantee period, the rate may change.

In summary, a fixed annuity is an annuity that operates much like a CD, offering low-risk tax-deferred accumulation at a fixed rate.

## Fixed Annuities vs. CDs

Fixed annuities operate very similarly to CDs. Both vehicles offer a safe way to save money, crediting interest rates typically higher than what’s available through savings accounts by requiring you to lock your money away for a period of time. However, fixed annuities have longer investment terms and tax-preferential treatment, making them a better choice for retirement savings. As CDs are the more well known of the two products, it can be easier to understand fixed annuities using a side-by-side comparison:

	<b>FIXED ANNUITY</b>	<b>CD</b>
Sold By	Insurance companies	Banks
Size	\$2,500 – \$1,000,000	Virtually any denomination
Term	2 – 10 years	3 months – 5 years
Interest Rates	Vary by term and size but typically higher than CD rates	Vary by term and size but typically lower than fixed annuity rates
Taxes	Taxes on interest gains deferred until money is withdrawn	Interest taxable annually as earned
Liquidity	Typically a portion of the account balance is available for withdrawal annually	Generally no (free) access to account balance is available
Withdrawal Provisions	Can generally withdraw accumulated interest or 10-15% of account balance for free if age 59½ or older	All withdrawals are charged, typically equal to a portion of the interest you’ve earned
Financial Protection	Backed primarily by the issuing insurance company, and additionally by State Guaranty Funds	Insured by the FDIC (up to \$250,000 total per bank)
Legacy	Asset passed directly to beneficiary without going through probate process	Probate process required to pass asset to heirs

Does not cover all products or all companies. Specific information available by product upon request. Updated as of June 2020.

\* Fixed annuity premiums of more than \$1,000,000 may be possible with insurer’s approval.

Another key difference is that fixed annuities can be annuitized at the end of the investment term. Annuitization is the process of turning savings into a stream of steady income, guaranteed to last a number of years or for life. This feature is what makes annuities good for retirement income and qualifies them for tax-preferential treatment.

## Benefits

Fixed annuities are a useful tool for retirement savings. They provide a safe, tax-advantaged way to earn a good return on savings needed in the near future. They are very similar to CDs, with added benefits:

### ✓ **Guaranteed, Strong Return**

The money you invest in a fixed annuity will accumulate at a fixed rate, which is specified upfront and guaranteed for the entire investment term. Fixed annuities generally offer higher rates than CDs with the same investment term length.

### ✓ **Tax-Deferred Growth**

From the government's perspective, an annuity is a retirement savings vehicle. As such, no taxes are paid until distributions are made. For a fixed annuity, this means that interest will accumulate and compound without incurring annual taxes, as is the case for a CD.

### ✓ **Principal Protection**

Unlike with most other investments, there is no market risk associated with a fixed annuity. Your principal is protected and guaranteed to accumulate at a fixed rate, making fixed annuities a good place to park retirement money you don't want to risk losing.

### ✓ **Some Liquidity**

Fixed annuities provide some liquidity, typically making interest earned or 10-15% of the contract's account balance available penalty-free annually if you're over 59½.

### ✓ **Simple & Easy to Understand**

There are a lot of complex products, but a fixed annuity is one of the simple ones. Assuming you leave your money in the fixed annuity until the end of the term, all you need to know is (1) how long until your money is available and (2) what your return will be over that period of time. There are no hidden fees that you need to worry about.

## Drawbacks

Despite these benefits, fixed annuities are not good for everyone or for all situations. Here are some of the drawbacks:

### X **Penalties for Withdrawals under Age 59½**

Fixed annuities are really meant to be used for retirement savings. The IRS issues a 10% penalty on gains withdrawn from a fixed annuity for account holders under the age of 59½.

### X **Not for Generating Income**

While the fixed annuity has a lot of great benefits, it's not the most effective way to generate income in retirement. Instead, fixed annuities are typically used for accumulating wealth. There are other products that are better for converting assets into income, like income annuities.

## Typical Buyers

Just like with any product, fixed annuities might make sense for you, or they might not. We've compiled a checklist to help you figure out whether a fixed annuity fits your investment needs.

### **Consider buying a fixed annuity if...**

- ✓ You have money to invest for at least 3 years but want access to it within 10 years
- ✓ The money you're investing is earmarked for retirement or to be passed on to heirs
- ✓ You're already taking advantage of your employer's 401(k) match
- ✓ You want greater certainty and principal protection
- ✓ You want to preserve some liquidity

### **A fixed annuity is probably not the right product for you if...**

- ✗ You need to access your money within 3 years or before age 59½
- ✗ You aren't taking advantage of your employer's 401(k) match
- ✗ You're interested in high risk investments and willing to risk principal to achieve it
- ✗ You're interested in generating income in retirement

## Fixed Annuity Rates

Fixed annuity interest rates will vary over time as market conditions change, being driven most notably by longer-term Treasury and investment grade corporate bond yields. In addition, the size of your investment, length of time you're willing to lock away your money, and the credit rating of the carrier will impact the rate. As of June 2020, insurers are offering the following fixed annuity rates, shown below as the annual yield to maturity.

A.M. BEST RATING	3 YR	4 YR	5 YR	6 YR	7 YR	8YR	9 YR	10YR
A++	2.25%	2.25%	2.25%	2.25%	2.25%	–	–	–
A+ or better	2.25%	2.25%	2.70%	2.70%	2.70%	2.75%	2.75%	2.75%
A or better	2.25%	2.25%	3.15%	2.70%	2.70%	2.75%	2.75%	2.75%
A- or better	2.70%	2.55%	3.15%	3.05%	3.10%	3.10%	2.95%	3.00%
B++ or better	2.70%	2.55%	3.87%	3.82%	3.89%	3.10%	3.55%	4.00%
B+ or better	2.70%	2.55%	3.90%	3.90%	3.89%	3.10%	3.55%	4.00%

Fixed annuity yields to maturity shown for high-band contracts offered by carriers with minimum credit rating according to A.M. Best. Rates as of 6/4/2020.

Understanding how the premium, investment term, and carrier’s credit rating drive interest rates will help you to select the fixed annuity that best suits your needs. Expect to have to think about the following:

**Premium:** The higher the premium, the higher the rate. Larger fixed annuity premiums will have access to higher interest rates. A portion of the insurance company’s expenses are fixed per contract such that incremental premium can essentially be invested without costing more. Said another way, there is a bonus for larger premium deposits.

**Investment Term:** Typically longer investment terms will offer higher rates. A longer time horizon gives insurers more flexibility for investing your money and weathering any market fluctuations. As is the case for bonds and other fixed income instruments, investors have the right to demand higher returns the longer their money is locked away. Occasionally, there will be pricing anomalies, such as a yield curve inversion or an insurer offering a very competitive rate but only at a specific term, that cause this general rule to not hold true.

**Insurer’s Credit Rating:** The higher the insurer’s credit rating, the lower the rate, but the safer the investment. Given that fixed annuities are not backed by the FDIC and instead by guaranty funds which vary by state, it’s an important factor to consider.

# Financial Value

A fixed annuity credits a fixed interest rate over a specified period of time, much like a CD. On a pre-tax basis, the value of the fixed annuity is understood simply by its interest rate, or the rate at which you'll earn a return. But, fixed annuities are even more valuable on an after-tax basis. Unlike CDs, interest earned on a fixed annuity is not taxed until money is withdrawn from the contract. This not only means lower taxable income for you during the accumulation period, but also additional compounded interest.

## CASE STUDY

To illustrate the value of a fixed annuity, let's take Kelli, a 55-year-old starting to prepare for retirement, as an example. Kelli has \$800,000 of post-tax savings that she's set aside for retirement. It's currently invested in the stock market, but she'd like to move \$100,000 to something safer. She's considering a 5-year CD or fixed annuity.

During her search, Kelli finds a 5-year fixed annuity returning 3.32%, significantly more than the 1.55% her bank is offering for a 5-year CD. This chart compares the growth of the two products and illustrates the power of the fixed annuity's tax-deferred growth.

The fixed annuity will produce an extra \$9,800 pre-tax (\$7,100 post-tax) over the 5-year period. Considering Kelli's age, timeline, and her plans to use the money for retirement, the fixed annuity is the more sensible investment for her. Plus, if she decides to roll the money over into another annuity in 5 years, she'll be able to extend the tax deferral.

**Fixed annuity crediting 3.32%**

**CD crediting 1.55%**

Charts show cumulative interest and taxes. Fixed Annuity rates based on a \$100,000 policy from American Life. CD rates based on a \$100,000 investment with Ulster Savings Bank. Rates as of 6/4/2020.

## Taxation

In our discussion of fixed annuities thus far, we've assumed that the purchase was made with after-tax personal savings. However, it's also possible to buy a fixed annuity with qualified funds, such as within an IRA. In this case, the fixed annuity doesn't provide any additional tax benefits beyond what the IRA offers, which is tax-deferral of gains until money is withdrawn.

Continuing with the original assumption that the fixed annuity is being purchased with non-qualified funds, let's dig deeper into the tax treatment at each phase of the contract:

- **There are no taxes due during the investment term.** Your money isn't subject to taxation while it's growing. Not paying taxes means that you're able to keep more money invested and earning interest. And, this benefit continues as long as you keep your money in the contract, which can be beyond the investment term.
- **Instead, you pay taxes once money is withdrawn** whether during, at the end of, or after the investment term of the contract. Assuming the fixed annuity was purchased with after-tax savings, only the interest gain portion of your withdrawal will be taxable at ordinary income rates. (If your fixed annuity is held in a Traditional IRA, all withdrawals will be taxable.) Waiting until you're in retirement or in a lower tax bracket to withdraw can reduce the taxes you owe. Note that you will incur penalties if you withdraw money before age 59½ or more than what's allowed in your contract.
- **You can continue your tax-deferral by rolling over your fixed annuity into a new annuity.** When your fixed annuity investment term ends, you're not obligated to withdraw your funds. You can choose to roll it over into another fixed annuity or a different type of annuity through a tax-free 1035 exchange.

Tax treatment of these payments can be tricky, so be sure to reach out to a tax advisor for a complete explanation.

# Portfolio Strategies

Investment decisions should not be made individually or in isolation. Instead, consider your entire financial portfolio and situation when investing. Here are some ways to think about a fixed annuity fitting into your portfolio strategy.

## Diversification

When diversifying your retirement portfolio, you will likely select a combination of equities and bonds that’s appropriate for both your risk appetite and your age/investment horizon. As a fixed income investment, fixed annuities have a place in any well-diversified portfolio. Consider your fixed annuity purchase as portion of your assets you’d otherwise have allocated to bonds.

### CASE STUDY

55-year-old Kelli’s \$800,000 in savings are currently invested at a 70/30 mix of stocks and bonds. She wants to maintain her equity exposure and overall investment mix when she purchases a \$100,000 5-year fixed annuity.

How does she do it? At a 70/30 mix, Kelli had \$560,000 (70%) invested in equities and \$240,000 (30%) invested in bonds. After transferring \$100,000 to a fixed annuity, Kelli will have to rebalance the remaining \$700,000 to an 80/20 mix. Doing so maintains her \$560,000 exposure to equities and decreases her investment in bonds to \$140,000. Once adding back in the \$100,000 fixed annuity, which acts as a fixed income investment, Kelli has maintained her desired 70/30 portfolio diversification.

Before Fixed Annuity Purchase

■ Equities ■ Bonds

After Fixed Annuity Purchase

■ Equities ■ Bonds ■ Fixed Annuities

## Laddering

Breaking up your purchase into multiple fixed annuities with different investment terms is a useful strategy in a low interest rate environment. You're able to secure a higher interest rate today that's only available for longer time commitments while also creating multiple opportunities to reinvest at potentially higher future rates. For example, instead of buying one 5-year fixed annuity, you could buy three fixed annuities with maturities of 3 years, 5 years, and 7 years. The money locked in for longer will be eligible for higher rates today. And, you'll have liquidity available at multiple dates in the future, which makes it more likely that you'll catch rising rates.

### CASE STUDY

If Kelli employs this strategy, she'll split her \$100,000 purchase into multiple smaller purchases, keeping the average investment term close to 5 years. Based on current rates and her personal circumstances, Kelli decides to split her investment evenly between 3-year, 5-year, and 7-year fixed annuities, crediting 3.00%, 3.32%, and 3.25% respectively. This way, she'll have funds available in 3 different years, giving her more reinvestment opportunities.

Chart shows investment and cumulative pre-tax interest. Fixed Annuity rates based on three \$33,333 policies from Oceanview and American Life. Rates as of 6/4/2020.

## Fixed Annuity + Annuitization vs. Longevity Annuity

With your fixed annuity, you have several choices at the end of the investment term. If you are planning to annuitize your fixed annuity, you can also consider purchasing a longevity annuity today. The money you invest in a longevity annuity will produce a guaranteed lifetime income stream starting at some point in the future, resembling what your annuitized fixed annuity will look like.

Whereas the fixed annuity will become liquid at the end of the investment term, the longevity annuity is locked-in, and its value can only be accessed through income payments. A fixed annuity plus annuitization strategy has more liquidity and optionality, but a longevity annuity will offer income payments that are locked in regardless of the future changes in rates.

**CASE STUDY**

Let’s revisit Kelli’s decision to buy a \$100,000 5-year fixed annuity at age 55, ending at age 60. Kelli is aware of the fixed annuity’s annuitization option and thinks it might be a good way to convert a portion of her retirement savings into lifetime income. Knowing that generating income is important to her, Kelli is advised to consider purchasing a longevity annuity instead today, which will allow her to lock in her future income regardless of future rates.

To compare the two strategies, let’s assume that income annuity rates remain constant over the next 5 years. Kelli’s first option is to purchase a \$100,000 5-year fixed annuity today and in 5 years convert the proceeds into an immediate annuity. Kelli’s second option is to use the \$100,000 to purchase a longevity annuity with income payments starting in 5 years.

If she goes with the first option, her \$100,000 will accumulate in a fixed annuity at 3.32% to \$117,739 in 5 years. Then, she will annuitize by converting the \$117,739 to an immediate annuity, which pays \$5,405 annually for life. In the second option, Kelli buys a \$100,000 longevity annuity today, gives up her liquidity, but locks in annual income for life of \$5,387. Because of today’s interest rate environment, the longevity annuity actually pays 0.3% less than the immediate annuity. But the immediate annuity’s rates cannot be locked in ahead of time.

**\$100,000 Fixed Annuity**

**\$100,000 Longevity Annuity**

(1) 5-year fixed annuity from American Life offering 3.32% then buys a Guardian immediate annuity life with cash refund policy for a 60-year-old female. (2) New York Life longevity annuity life with cash refund policy for a 55-year-old female with income starting at age 60. All rates as of 6/4/2020.

The two strategies are summarized in the table below.

	FIXED ANNUITY	LONGEVITY ANNUITY
Purchase	Money is invested in a fixed annuity.	Money is invested in a longevity annuity.
Deferral Phase	Account accumulates with interest. Some liquidity is available.	Insurance company invests your money, but its growth is invisible and illiquid.
End of Investment Term	Account becomes fully liquid. Annuitization elected, effectively purchasing an immediate annuity.	N/A
Payout Phase	Income payments begin immediately and continue for life.	Income payments begin at the end of the deferral period and continue for life.

## Features & Riders

Fixed annuities are relatively simple investments, but there’s still some terminology, features, and riders that you’ll need to understand. We’ve outlined some key concepts for you here.

### Interest Rates

When you buy a fixed annuity, you are locking in a return that’s guaranteed for the investment term. The fixed annuity could be structured to offer the same crediting rate every year or a different rate in the first year, which is higher than in subsequent years. Ultimately, and assuming you won’t be cashing out early, what matters is the yield to maturity, or the annual effective return you’re earning over the investment term. Finally, at the end of the term, you’ll have the option to continue the fixed annuity with an annually renewable rate. Here’s how the rates will be identified:

- **Base Rate:** annual interest rate credited to your account during the investment term
- **Additional First Year Interest Rate Bonus:** additional interest rate that might be added to the base rate in the first year
- **Yield To Maturity:** the effective annual interest rate when spreading the bonus rate evenly over every year

- **Renewal Rate:** after the investment term ends, your money will continue to earn interest at the prevailing renewal rate, which moves according to market conditions
- **Guaranteed Minimum Renewal Rate:** the lowest renewal rate possible (floor)

## Surrender/Contract/Guarantee Period & Rates

Surrender charges will apply during the investment term. During these years, if you withdraw more than what's allowed – typically 10% of your account value or cumulative interest, if anything – fees will be assessed. Most fixed annuities have a pre-set declining surrender charge schedule which can start as high as 10% in the first year and will then decline by typically 1% per year. Here's how the surrender charge period will be identified:

- **Surrender Charge Period:** years during which you'll be charged to access anything greater than the free withdrawal
- **Surrender Charges:** Rates applied to amount surrendered above free allowance for each year of the surrender charge period

Note that typically the surrender charge period will be the same as the rate guarantee period (investment term), with a 30-day window at the end to take your money out for free. Some products are occasionally structured to have a surrender charge period longer than the guaranteed rate period, with no window to take your money out for free. This option could make sense if you expect interest rates to increase, but it's generally not something we'd recommend. In these cases, the product is not considered a multi-year guaranteed annuity.

## Free Withdrawals

Fixed annuities typically allow you to access a portion of your money penalty-free. The allowance differs by insurer, but it's often cumulative interest or 10% of the account balance. You should only plan to take advantage of these withdrawals if you're at least 59½, as the IRS imposes a 10% penalty on the earnings portion of all withdrawals made before you reach that age.

Note that if your fixed annuity is qualified and was purchased within a 401(k) or IRA, any applicable required minimum distributions will be withdrawable penalty-free with most insurers. With some cases, you will need to purchase an “RMD rider” for a 0.10%-0.20% reduction in the crediting rate.

### **Market Value Adjustment vs. Book Value**

There are two types of fixed annuities: those with a market value adjustment (MVA) and those without, known as book value (BV). The MVA or BV classifications only impact you if you decide to withdraw funds early. In the case of a book value fixed annuity, the amount you’re able to withdraw will simply be the account value less surrender charges described above. However, a fixed annuity with a market value adjustment could reduce the amount you’re able to access upon surrender.

The market value adjustment will, as the name suggests, adjust the amount you’re able to surrender based on market conditions at that time. If interest rates have gone up since purchase, an additional fee will be assessed that lowers the withdrawal value. The reverse is also true. If interest rates have gone down since purchase, the charge upon withdrawal will actually decrease.

Fixed annuities with MVAs are actually very common and well-liked, offering higher interest rates than their BV counterparts. The market value adjustment protects the insurance company from adverse behavior by charging you for surrendering in a rising rate environment. That’s because the insurance company would otherwise lose money liquidating assets to fund your surrender (bond prices go down when interest rates go up). Having this downside protection means they can offer you a higher rate.

Finally, some fixed annuities offer a return of premium (ROP), which guarantees that you’ll always be able to get at least your original premium out of the contract at any time. In other words, surrender charges and market value adjustments will be capped at the interest you’ve accumulated.

**CASE STUDY**

For example, let’s say that interest rates have risen, and Kelli decides to surrender her 5-year fixed annuity with MVA at the end of year 4 to take advantage of the increasing interest rate environment. To measure the change in interest rates over those 4 years, the insurance company uses a corporate bond index. At purchase, that index showed a rate of 3%, which 4 years later has increased to 5%. For simplicity, we’ll assume that the insurance company calculates the MVA adjustment as  $\{(1 + \text{purchase index}) / (1 + \text{today’s index}) - 1\}$ , which in this case produces  $\{1.03 / 1.05 - 1\}$ , or -0.019.

At the end of year 4, Kelli’s fixed annuity is worth \$113,956, of which she’s allowed to take 10%, or \$11,396 for free. The rest, \$102,560, will be subject to a surrender charge and the MVA adjustment calculated above. If the applicable surrender charge rate is 2%, then Kelli’s charges would be:

*Surrender:  $-0.02 * \$102,560 = -\$2,051$  and  
 MVA:  $-0.019 * \$102,560 = -\$1,954$ ,  
 giving her a net surrender of  $\$113,956 - \$2,051 - \$1,954 = \$109,951$ .*

Fixed annuity balance	\$113,396	
– Free withdrawal	(11,396)	← 10% x fixed annuity balance
<hr/>		
Chargeable balance	102,560	
– Surrender charge	(2,051)	← 2% x chargeable balance
– Market value adjustment	(1,954)	← -0.019 x chargeable balance
<hr/>		
<b>Surrender value</b>	<b>\$109,951</b>	$\downarrow = \frac{1.03}{1.05} - 1 \left[ \begin{array}{l} \text{purchase index: 3\%} \\ \text{today's index: 5\%} \end{array} \right]$

MVA calculation for illustration purposes only and not representative of any particular insurance company’s process. Assumes \$100,000 5-year MVA accumulates at 3.32% per year, 10% free withdrawal provision, and year 4 surrender charge of 2%. Makes use of simplified MVA of  $(1 + \text{purchase index}) / (1 + \text{today’s index}) - 1$ , with assumed index of 3% at purchase and 5% today.

Note that this is a basic, simplified illustration of the MVA functionality. Each insurance company will have its own formula and underlying index. Also not illustrated here but potentially applicable is a floor for the surrender value of the premium accumulated at the guaranteed minimum interest rate in the contract.

## Payout Options

When you reach the end of your investment term, you have several options:

- **Lump-Sum Withdrawal:** You can take entire balance of your fixed annuity in a one-time payment.
- **Periodic or Scheduled Withdrawals:** You can leave your money in the fixed annuity earning the renewal rate and withdraw as needed or following a pre-determined schedule.
- **Annuitization:** You can convert your account balance into an immediate annuity that offers a guaranteed lifetime paycheck you can't outlive.
- **Rollover:** Through a 1035 exchange, you can rollover your fixed annuity into another annuity, fixed annuity or otherwise, penalty-free and tax-free.

## Riders

Fixed annuities can offer riders that are either included or added to the contract at an additional cost. Here are some of the options you might see, noting that options vary from insurer to insurer:

- **Death Benefit Rider:** Should you pass away before the end of the investment term, your beneficiaries can receive the annuity's full accumulated account value immediately rather than waiting until the end of the investment term.
- **Living Needs Benefit/Unemployment Rider:** Should you start living at a health care facility, become terminally ill, become disabled, or lose your job, additional or full liquidity of your contract will be available.
- **Home Health Care Rider:** If you begin to receive home health care recommended by your doctor, you may be able to access your account balance without penalty.
- **Interest Opportunity Rider:** For a fee or a lower guaranteed rate, you may be able to benefit from a rising rate environment.
- **Enhanced Beneficiary Benefit Rider:** Your beneficiaries may receive additional funds to help offset death expenses, such as tax obligations.
- **Enhanced Spousal Continuation Rider:** If your spouse is your sole primary beneficiary, he or she can continue your policy upon your death as the new owner.

## Buying Tips

Buying a fixed annuity is easier when you're equipped with the right information. In addition to being available to help walk you through the process, Blueprint Income has compiled a list of things to keep in mind:

### **Where to Buy a Fixed Annuity**

Fixed annuities are sold via insurance agents, brokers, and financial advisors. Blueprint Income is licensed to sell fixed annuities in all 50 states and The District of Columbia. Find the fixed annuities that meet your needs and compare them side-by-side on our website at <https://www.blueprintincome.com/fixed-annuities>.

### **Focus on Interest Rate & Credit Rating**

Fixed annuities are largely uniform from insurer to insurer, meaning you can make your decision based on just two things: the interest rate being offered and the insurer's credit rating. An insurer's credit rating, similar to a bond's rating, measures their financial strength and ability to meet future obligations. Like bonds, the higher the credit rating, the lower the rate. Buy the product that offers the best rate at the rating that's right for you.

### **Consider Your Agent/Broker's Incentives**

The Department of Labor worked for nearly a decade to reform the requirements for giving financial retirement advice. The goal was to ensure that advisors, agents, and brokers put their clients' best interests before their own. The reforms were not implemented, so you should be extra cognizant when considering an annuity purchase to understand your agent or broker's incentives. How are they compensated on the sale? How do they select the products they're showing you? Do they work with only one or a handful of insurance companies?

### **Laddering Strategy**

Just like with CDs, you can use a laddering strategy by buying multiple fixed annuities with staggered terms, i.e. 3-, 4-, 5- and 6-year terms. Because they come due at different dates, the hope is that you'll be able to take advantage of an upswing in interest rates.

### **Don't Be Scared of Market Value Adjustments**

If you know you'll be able to keep your money invested for the full investment term, go with a market value adjusted (MVA) fixed annuity. You'll get a better rate and will only be penalized if you surrender early (which we just decided you're not going to do!).

**Your Plans at the End of the Investment Term Might Change What You Buy Today**

What are you going to do with your money when you reach the end of the investment term? You could roll it over into a new annuity, annuitize it, or withdraw it. Plan ahead so that you can anticipate the taxes you'll owe under each scenario. And, if annuitization is a possibility, it might be better to buy a longevity annuity today instead.

“Modernize retirement security through trust, transparency, and by putting the customer first.”

A few years ago, we were a small team with a simple and straightforward belief — that the decision to buy an annuity should be easy, unbiased, and all about you.

That belief is reinforced every day as we continue to grow and connect with people all over the United States that we’re able to help in ways large and small. Sometimes, helping out means saying it doesn’t make sense to buy an annuity. And of course that means less business for us. But we’re OK with that because the most valuable thing we can build is trust.

If you’re considering purchasing an annuity for your retirement, you won’t find better product selection and a more informed team than the one at Blueprint Income. We hope to have the opportunity to demonstrate that to you.

Here’s what we promise to everyone who works with us:

- No sales pitch
- Information on retirement income products in plain English
- Only simple annuities from insurers with strong financial ratings
- Sophisticated and tailored advice from our team and our technology solutions

The information provided is not intended to be a recommendation to purchase an annuity. Annuities are distributed by Blueprint Income, Inc. Guarantees subject to the claims-paying ability of the insurer. Blueprint Income, Inc. is a licensed fixed annuity producer in New York, NY. Blueprint Income, Inc.'s licensed fixed annuity producers are licensed in all 50 states and The District of Columbia. Blueprint Income, Inc. does not advise clients on the purchase of non-fixed annuity products. The information presented here is not intended to be a recommendation to purchase a fixed annuity, immediate annuity, longevity annuity, or Qualified Longevity Annuity Contract. The contract features described may not be current and may not apply in the state in which you reside. Insurance companies often issue contracts which are 'state-specific'. Insurance companies also change their products and information often and without notice. Please call (888) 867-7620 if you have any questions or concerns. Annuities are not FDIC or NCUA insured, not bank guaranteed, may lose value, and are not a deposit. You are strongly urged to consult with financial planning, tax, and legal advisors to determine if a fixed annuity, immediate annuity, longevity annuity or Qualified Longevity Annuity Contract is suitable in your financial situation.
